

TheQuizz API

Om

Dette API leverer en vidensquiz med fokus på **computer science** som et proof of concept. Fremadrettet kan quizen udvides til at dække andre videnskabelige emner. Formålet er at skabe et sjovt og engagerende quiz-format, der kan bruges i sociale sammenhænge, f.eks. som en aktivitet til en hyggelig aften.

Når der er lavet proof of concept, og der er tid, vil der blive tilføjet andre kategorier til quizen.

Endpoints and responses (mangler)

Method	URL	Request Body (JSON)	Response (JSON)	Error (e)
GET	/api/game/questions?limit=10&category={category}&difficulty=easy		[game]	
POST	/api/game/{gameId}/player/{playerId}/question/{questionId}/answer		{"playerId": 789, "answer": "Coding language"}	(e1)
GET	/api/game/{gameId}/scores			(e2)
PUT	api/admin/question		new question	
UPDATE	/api/admin/question/{questionId}			
DELETE	/api/admin/question/{questionId}			

Request Body and Response Formats (mangler)

(1) game format

```
{  
  
  {"game": [{  
    "question": "What is the Java",    "rightAnswer": "Coding  
language",    "wrongAnswers": ["Software", "Coffe", "coffe Bean"]}]}
```

Errors (mangler)

(e) All errors are reported using this format (with the HTTP-status code matching the number)

```
{ status : statusCode, "msg": "Explains the problem" }
```

- (e1):{ status : 404, "msg": "No content found for this request" }
- (e2):{ status : 400, "msg": "Field 'xxx' is required" } (for example,
no name provided) (game id wrong)
